

Solutions (과제 해답)

작성한 코드와 정답을 비교해 보세요.

Solution - Task 1 (Number Triangle)

```
def printLine(n):  
    for i in range(1, n + 1):  
        print(i, end=' ') ← 줄바꿈 방지 옵션  
    print() # 줄바꿈 (New line)  
  
num = int(input('Input: '))  
for i in range(1, num + 1):  
    printLine(i)
```

Solution - Task 2 (Divisor Counter)

```
def getNumOfDivisors(number):  
    count = 0  
    for i in range(1, number + 1):  
        if number % i == 0:  
            count += 1  
    return count  
  
# Main Logic  
problemDescription()  
n1 = int(input('Type the first number: '))  
n2 = int(input('Type the second number: '))  
print('Number of divisors...', getNumOfDivisors(n1))
```

Solution - Task 3 (Dice Game)

```
import random

def Roll():
    return random.randint(1, 6)

def Compare(A, B):
    if A > B:
        print('Dice A win')
    elif A < B:
        print('Dice B win')
    else:
        print('Draw')

DiceA = Roll()
DiceB = Roll()
Compare(DiceA, DiceB)
```

실습 60이 완료되었습니다.

수고하셨습니다. (Great job!)
